Protractor Test

```
describe('Login Test', () => {
  it('should login', () => {
    browser.get('/login');
    element(by.id('email'))
    .sendKeys('test@example.com');
    element(by.id('password'))
    .sendKeys('password123');
    element(by.buttonText('Login')).click();
    expect(element(by.css('.welcome')).getText())
      .toBe('Welcome!');
  });
});
```

Playwright Test (Converted)

```
import { test, expect } from '@playwright/test';

test('Login Test', async ({ page }) => {
  await page.goto('/login');
  await page.fill('#email',
   'test@example.com');
  await page.fill('#password',
  'password123');
  await page.click('button:has-text("Login")');
  await expect(page.locator('.welcome'))
  .toHaveText('Welcome!');
});
```

Stop Wrestling with Legacy Tests

Protractor is deprecated. Selenium is complex. Playwright is the future.

Codien converts your entire test suite to Playwright with one click

From Complex Legacy Code to Modern Playwright

login-test.js — Selenium/Protractor

```
//Protractor -Complex

describe('Login Test', function() {
  it('should login user', function() {
    browser.get('/login');
    element(by.model('user.email')).sendKeys('test@example.com');
    element(by.model('user.password')).sendKeys('password123');
    element(by.buttonText('Login')).click();
    expect(element(by.binding('user.name')).getText()).toBe('Welcome!');

  });
});
```

login-test.spec.ts — Auto-Generated

```
// Playwright - Clean & Modern

import { test, expect } from '@playwright/test';

test('should login user', async ({ page }) => {
  await page.goto('/login');
  await page.fill('#username', 'user@test.com');
  await page.fill('#password', 'password123');
  await page.click('.login-btn');
  await expect(page).toHaveURL(/.*dashboard/);

});
```
